

In today's eco-conscious world, there is a growing need to address environmental issues and develop user-friendly recycling programs. For years, Da-Lite has sought sound environmental solutions that address its operations, its customers and the communities where Da-Lite is a responsible corporate citizen.

The company announced several initiatives that are enhancements to its ongoing environmental efforts. In the Warsaw, IN corporate headquarters, the levels of VOCs were drastically reduced with the final implementation of a low emission powder coating paint system. The company also launched the new Da-Lite Screen Green™ Exchange Program for recycling old screens replaced with new Da-Lite installations.

Da-Lite has achieved GREENGUARD® certification for the largest number of fabrics in the audio visual industry, including the GREENGUARD® Children and Schools Certification program. As an audio visual industry leader for nearly 100 years, the company's customers, employees and communities count on Da-Lite to make a difference.
